## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-16, drawn to a motor for window lifter, classified in class 310, subclass 42.

II. Claims 16-20, drawn to method of manufacturing an electromechanical device , classified in class 29, subclass 626.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case a method for connecting a power semiconductor to the other electronic part by using thermo-coupling process can be used in any electric device such as radio or rectifier, and also a power semi-conductor to the other electronic part for a window lifer and be connected by different method than thermally coupled ,it can be connected with our heat such as cold press process.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2834

4. A telephone call was made to Applicant's representative on September 16, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
